Read the text and questions below. For each question, choose the correct answer. (5 questions)

Technology in the future

By Sian Wilson, a technology futurist

I believe that technology will change the way we travel, work, and do things in our homes, in the future. We won't cook anymore because we will be using 3D printers to print food. Robots will be doing housework so we'll have more free time. We'll spend that free time watching movies and playing games on digital walls in our homes. People will be using self-driving cars to go to work. There will be less traffic and fewer accidents. Robot police will be working with human police officers, to help reduce crime. Drones will be flying overhead to watch out for any bad activity. They'll also be bringing

people's shopping and mail to them at home and work. Many people worry that technology in the future will make our lives more difficult because there will be fewer jobs. I think that technology will make our lives better because we will have more free time.

Questions:

17. What is Sian talking about in the text?

- | | | | |
|---|----------------------------------|---|---------------------------|
| A. The different ways technology can help us. | B. The many uses of 3D printers. | C. People won't go to work in the future. | D. Robot rescue workings. |
|---|----------------------------------|---|---------------------------|
