

Name: _____

Journey: Stories of Migration: Read p.239--247

Put an X in the box beside the correct answer.

1. Migrating locusts may be frightening because ...
 - they have a very strong, sour smell
 - when they travel together their moving wings sound like thunder
 - they turn a scary color
 - they eat humans
2. Which of the following **does not provide an example** of how locusts may hurt people?
 - Locusts eat all of the plants in one area.
 - Locusts eat plants people use as their own food.
 - Locusts leave the gardens empty of vegetation.
 - Locusts swarms make a thunderous noise.
3. How are locusts' swarms **different** today than they were 2,000 years ago?
 - They cause highway car accidents.
 - The locusts make the sky as dark as night, making airplane pilots have a hard time flying.
 - They are much smaller in size.
 - They do not travel in swarms anymore.
4. Grasshoppers who have plenty of food behave differently than grasshoppers with little food because –
 - grasshoppers with plenty of food stay in the same place.
 - grasshoppers with plenty of food change their body features often.
 - grasshoppers with little food will die first.
 - grasshoppers with little food camouflage in order to find more food.

Answer the questions.

- 5 What is called "migration"?
