

Cálculo con fracciones

1 Reduce a común denominador y calcula.

$$a) \frac{7}{3} + \frac{1}{4} = \boxed{} + \boxed{} = \boxed{}$$

$$c) \frac{2}{3} + \frac{3}{10} = \boxed{} + \boxed{} = \boxed{}$$

$$b) \frac{3}{4} + \frac{1}{12} = \boxed{} + \boxed{} = \boxed{}$$

$$d) \frac{7}{9} + \frac{3}{5} = \boxed{} + \boxed{} = \boxed{}$$

2 Reduce a común denominador y calcula

$$a) \frac{7}{3} - \frac{1}{4} = \boxed{} - \boxed{} = \boxed{}$$

$$b) \frac{3}{4} - \frac{1}{12} = \boxed{} - \boxed{} = \boxed{}$$

3 Calcula

$$a) \frac{2}{3} \times \frac{7}{8} = \text{—}$$

$$d) \frac{2}{5} : \frac{6}{4} = \text{—}$$

$$b) \frac{4}{5} \times \frac{1}{6} = \text{—}$$

$$e) \frac{9}{4} : \frac{6}{8} = \text{—}$$
