
Determine which number correctly answers both equations.

Ex) $4 \div 1 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 1 = 4$

1) $45 \div 5 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 5 = 45$

2) $4 \div 4 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 4 = 4$

3) $14 \div 7 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 7 = 14$

4) $6 \div 1 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 1 = 6$

5) $9 \div 9 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 9 = 9$

6) $21 \div 3 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 3 = 21$

7) $45 \div 9 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 9 = 45$

8) $14 \div 2 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 2 = 14$

9) $42 \div 6 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 6 = 42$

10) $32 \div 8 = \underline{\hspace{2cm}}$
 $\underline{\hspace{2cm}} \times 8 = 32$
