Fill in the gaps with the words:

Sense buds identify organ delicious bumps collecting brain

Food tastes differently due to the of taste. The sense of taste allows us to and learn how Food tastes. The tongue is the sensory responsible for tasting. The tongue is covered with called taste buds, known as papillae in charge of information about different tastes and send it to the through the taste nerves.

There are different types of tastes. The grouped in separate parts of the tongue.

The taste buds identify main tastes:

.....

.....

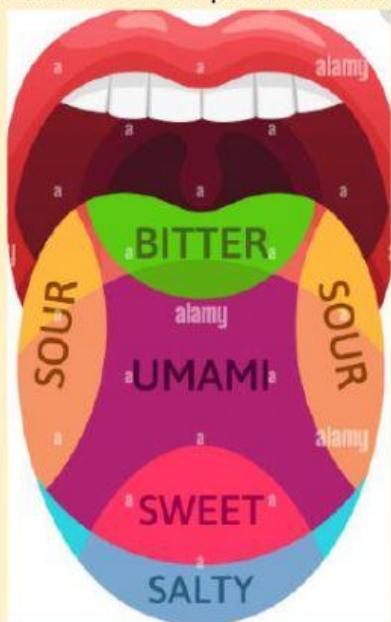

.....

.....

Umami is the word we use to refer to incredibly food.

2.. Look at the picture and fill in the gaps:

The taste buds for are on the tip of the tongue
The buds are on either side of the tongue
The taste buds are in the center of the back of the tongue near the throat.
The buds are in the middle of the tongue.
The buds are located on either sides and lower part of the tongue.
There are many hints of flavors and Savours produced by combining these five basic tastes.

Arrange in the right order:

chemical substances in the Apple
when we put an apple in our mouth
recognizing the type of taste and decide
communicate with the taste buds on the tongue.
the taste buds transmit this information to the brain
whether we like what we're tasting or not
through the taste nerves the brain is in charge of

Say true or false:

The sense of taste also helps to protect our health from foods that have gone off
this food doesn't taste right our brain will send signals to start eating it
the sense of taste is amazing and essential for life
All people have the same tastes.
