

## ENVIRONMENT (1)

Environmental ..... is a ..... problem nowadays. Many cities in the world are ..... smog (smoke + fog). I agree that this ..... (cause) mostly by human activities.

Many human activities lead ..... environment pollution. Firstly, we dump tons of garbage into the nature everyday. The garbage either ..... (collect) and ..... (bury) in the landfills, or ..... (burn). However, in the landfills, the juice from the garbage ..... the land and the water in the area, and burying the garbage ..... a lot of toxic air into the environment. Secondly, we burn ..... like coal, gas, and oil. These fossil fuels ..... (burn) for heating, for cooking, and for factories too. Burying these fossil fuels releases a lot of CO<sub>2</sub>, CO, and other toxic chemicals into the air, which ..... (cause) serious air pollution. Moreover, the vehicles we use to travel everyday ..... (pollute) the environment too. Exhaust fumes from these vehicles contain a lot of toxic chemicals. When these chemicals ..... (release) into the air, they cause serious pollution in the cities. In short, the environment ..... (pollute) because we dump garbage into the nature, we burn fossil fuels, and because of the vehicles we use to travel everyday.

In return, environment pollution has many bad effects ..... humans. In the short term, environment pollution makes us feel uncomfortable. We can smell the toxic air, or taste the contaminated water. When we travel on the road, we can feel the pollutant particles ..... on our face, our hair, our nose, and our clothes. In the long term, environment pollution has dangerous effects on our health. It leads ..... many kinds of diseases ..... cancer, heart diseases, or respiratory problems. Environment pollution ..... thousands of deaths everyday.

In conclusion, environment pollution is a pressing problem which ..... (cause) mostly by human activities, and results in many problems to human being.
