Studies such as the Genographic Project can contribute valuable information to researchers in many fields.

research, where is the boundary between public and private property?

But who owns the genetic information?		
For example, should companies have the	to	DNA information to other
companies without the	of the pe	eople who provided the samples?
Should companies that use DNA in medical rese	earch be require	ed to share the
of their work with the individuals or communitie	es whose geneti	ic information was used?
Some people that genetic inform	mation is a	resource that
belongs to		
Others believe that genetic information about a	person belong	s only to that person. In addition
many think that if companies	earn a profi	t from their research, there is littl
for them to invest	in genetic studi	es. In the world of genetics
