

There are aliens \_\_\_\_\_, somewhere. I strongly believe this. Not sure what they look like, though. I \_\_\_\_\_ they are green, like they are in science fiction movies. I also don't think they look like us. But I'm \_\_\_\_\_. I just don't think we'll ever \_\_\_\_\_ find any. They live too far away. If you think about \_\_\_\_\_, there has to be aliens out there. All a planet needs is to be warm and have water and \_\_\_\_\_. There are billions and billions of planets in the universe, so there \_\_\_\_\_ millions and millions that have life. Alien life. It's also likely that \_\_\_\_\_ aliens are much more intelligent than we are. I wonder what \_\_\_\_\_ really intelligent aliens visited Earth. What \_\_\_\_\_ them?
