

TIPOS DE ECOSISTEMAS

Arrastra cada ecosistema a su lugar según sea terrestre, acuático o mixto.

The diagram illustrates the classification of ecosystems into three main categories: Terrestrial (Terrestres), Aquatic (Acuáticos), and Mixed (Mixtos). A central globe shows the distribution of these ecosystems across the Earth's surface. Surrounding the globe are nine small images of different ecosystems, each with a blank label box for identification. Lines connect these images to their respective locations on the globe.
