

Conservation: The preservation or protection of soil

Add one or more nutrients to soil

Plant different crops on the same land in different years

Plant grasses between rows of crops to prevent soil from blown away

Plow furrows across the slope to slow down speed of flowing water down the hill

Flat shelves that are cut into a hillside. Crops planted along terrace

Plant tall trees along the edges of farm to slow wind speed

Laws to stop the pollution

Clean land
Stop polluting soil

Inform people of the value of soil
How to conserve it
