

Áreas de cuerpos redondos

El **área de un cuerpo redondo** se obtiene sumando las áreas de las superficies, planas y/o curvas, que lo delimitan.

Área de la esfera

$$A = A_{\text{SUP. CURVA}}$$

$$A = 4 \times \pi \times r^2$$

- Calcula el área de una esfera de radio 12 cm.

$$A_{\text{ESFERA}} = \quad \text{cm}^2$$

- Calcula el área de una bola de madera de radio 40 cm.

$$A_{\text{ESFERA}} = \quad \text{cm}^2$$

- Calcula el área de este cono.

$$A_{\text{BASE}} = \quad \text{cm}^2$$

$$A_{\text{SUP. CURVA}} = \quad \text{cm}^2$$

$$A_{\text{CONO}} = \quad \text{cm}^2$$

Área del cono

$$A = A_{\text{BASE}} + A_{\text{SUPERFICIE CURVA}}$$

$$A = \pi \times r^2 + \pi \times r \times g$$

- Calcula el área de un cono de radio 8 cm y generatriz 15 cm.

$$A_{\text{BASE}} = \text{ } \text{cm}^2$$

$$A_{\text{SUP. CURVA}} = \text{ } \text{cm}^2$$

$$A_{\text{CONO}} = \text{ } \text{cm}^2$$

- Calcula el área de este cilindro.

$$A_{\text{BASES}} = \text{ } \text{cm}^2$$

$$A_{\text{SUP. CURVA}} = \text{ } \text{cm}^2$$

$$A_{\text{CILINDRO}} = \text{ } \text{cm}^2$$
