

DIVISION (Using Sharing Method)

Division means to share, to divide, to split to put into equal groups or sets.

Using sharing

$$12 \div 3 = 4$$

Dividend
total
number of
objects

Divisor
number of
equal
groups

Quotient
number in
each group

Drag and drop the objects to create groups to help you divide.
Use the numbering.

1. $8 \div 2 =$

2. $12 \div 3 =$

3. $15 \div 3 =$

5. $15 \div 5 =$

Complete each division number sentence. Use the numbering to drag and drop the objects to show the grouping.

4. James has 14 beads. He shares them equally between his 2 friends. How many beads did each friend get?

$$\square \div \square = \square$$

5. Shavel has 12 sweets. She shares them equally among her 4 friends. How many sweets did each friend get?

$$\square \div \square = \square$$

6. Allec has 9 pencils. He puts the same number of pencils into 3 pencil cases. How many pencils did he put in each pencil case?

$$\square \div \square = \square$$

7. Rasheik caught 16 fishes. He divides them equally into 4 baskets. How many fishes did he put in each basket?

$$\square \div \square = \square$$
