Alfred Wallace was an explorer. He travelled to South America.

_____ he studied and catalogued plants and animals and developed his ideas about evolution. On the way back to England, his ship sank, together with his notes and collections. _____ forced Wallace to take _____ trip, this time to Indonesia, to collect more data.

In 1858, Wallace sent _____ article outlining his theory to Darwin and it was published alongside Darwin's own theory. Even though _____ developed the theory of natural selection at the same time, only one of them, Darwin, is famous to this day while _____ is seldom remembered. However, Alfred Wallace was happy with _____ recognition he received in the scientific community. He made _____ contributions to the development of evolutionary theory, such as _____ concept of how animals adapt to using bright colours to warn off predators.
