

## TOPIK: PENAMBAHAN PECAHAN

Contoh:

$$\begin{aligned}\frac{3}{4} + \frac{2}{5} &= \frac{3 \times 5}{4 \times 5} + \frac{2 \times 4}{5 \times 4} \\&= \frac{15}{20} + \frac{8}{20} \\&= \frac{23}{20} \\&= 1\frac{3}{20}\end{aligned}$$

Jika jawapan adalah pecahan tak wajar perlu ditukarkan kepada nombor bercampur

Semak penyebut  
Pastikan darab angka yang sama bagi penyebut dan pengangka

Lihat video penerangan supaya lebih jelas.

Latihan:

1)  $\frac{7}{10} + \frac{4}{10} = \underline{\quad} = \underline{\quad}$

2)  $2\frac{2}{7} + 3\frac{1}{7} = \underline{\quad} + \underline{\quad} + \underline{\quad}$   
 $= \underline{\quad}$

3)  $\frac{2}{3} + \frac{3}{4} + \frac{1}{6} = \frac{\underline{\quad} \times}{\underline{\quad} \times} + \frac{\underline{\quad} \times}{\underline{\quad} \times} + \frac{\underline{\quad} \times}{\underline{\quad} \times}$   
 $= \underline{\quad} + \underline{\quad} + \underline{\quad}$   
 $= \underline{\quad}$   
 $= \underline{\quad}$

4)

$$\begin{aligned}2\frac{2}{5} + 2\frac{1}{3} &= \quad + \quad + \frac{x}{x} + \frac{x}{x} \\&= \quad + \quad + \quad \\&= \quad -\end{aligned}$$

5)

$$\begin{aligned}2\frac{1}{5} + 4 + \frac{3}{4} &= \quad + \quad + \frac{x}{x} + \frac{x}{x} \\&= \quad + \quad + \quad \\&= \quad -\end{aligned}$$

6)

$$\begin{aligned}1\frac{1}{4} + 2\frac{1}{8} + \frac{1}{2} &= \quad + \quad + \frac{x}{x} + \frac{\times 1}{\times 1} + \frac{x}{x} \\&= \quad + \quad - + - + - \\&= \quad -\end{aligned}$$
