

THE EXCRETORY SYSTEM

The excretory system helps our body to eliminate **excess water** and **waste products**.

- The **kidneys** remove excess water and waste products and turn them into **urine**.
- The **ureters** are long tubes. The urine goes down here to the bladder.
- The **bladder** is like a bag. When it is full of urine, we go to the toilet.
- The **urethra** is a short tube. Urine leaves our body through here.
