

## Great Barrier Reef | Reading a Food Chain

Kelp, algae, plankton, and \_\_\_\_\_ get their energy from the sun. Kelp is a plant that grows very fast. Kelp feeds animals like \_\_\_\_\_. Algae gets its energy from the sun. Algae feeds sea cumbers and \_\_\_\_\_. Sometimes, sea urchins also eat \_\_\_\_\_. Fish are food for many animals, including dolphins. Dolphins are not apex predators, they are prey for \_\_\_\_\_. Crocodiles live there too. Sharks are too big for crocodiles, but they do eat \_\_\_\_\_.
