

Soluble and Insoluble Checklist

Soluble	Insoluble

Objects you may find around your home. (Use 8 different items for your experiment.)

Sugar, black pepper, salt, sand, drink mix, cinnamon, glitter, tea mix, ice, flour, rice, biscuit, macaroni etc...

Use these items to discover if they will dissolve or not. Put each item that you used into the correct section.

You will need some glasses with water and a spoon (so you can observe what is happening). Place each item into a glass of water and stir. Observe and record your discovery.
