

Reading exercise:

Life outside Earth

Have you ever wondered how the future will be? Most people say we will live outside Earth, and that sounds really cool. Nikita Vovolka is a Russian student of aerospace engineering; this is how he thinks life will be outside Earth.

"I think it will be very hard at the beginning, specially because the first colonizers won't have all the comforts they had on Earth. As you know, other planets don't have same composition as Earth, so people won't have a land to produce their own food or places to get fresh water. I believe they will develop systems that will help them with these situations, but it will definitely take a lot of time.

Another thing to take in count is the cost of living. During the first years, it will be extremely expensive to travel and live in the space; but with the time, these things won't be so expensive because they will be more common and more companies will offer them."

How about you? How do you think life will be outside Earth?

QUESTION TIME!

1. Choose True or False

Most people say we won't live outside Earth. TRUE / FALSE

Nikita Vovolka's major is space engineering. TRUE / FALSE

Nikita thinks life in space will be easy. TRUE / FALSE

Earth has a different composition, which is good for cultivating and getting water. TRUE / FALSE

2._Drag the words to the correct place

RUSSIA FOOD COST OF LIVING COMPANY
AEROSPACE ENGINEERING EARTH DEVELOP

_____ (n.) Major that studies aircrafts and objects that can be used in air and space.

_____ (n.) Estimate on how much you should pay to have a normal life in a certain place or situation.

_____ (v.) To evolve, to improve.

_____ (n.) Something you eat.

_____ (n.) Only planet that has life in it.

_____ (n.) Country located in Europe and Asia.

_____ (n.) Organization that sells goods or services.

3._Match with the correct option.

Nikita	won't be so expensive.
The first colonizers	will work as an engineer.
Other planets	will be suitable for living.
With the time, traveling to space	will live outside Earth.
Most people say we	won't be able to grow food.
