

The Tale of Two Brains

(Well, you'll fill in the blank. OK!)

So now we are going to start _____ men's brains, women's brains and how they're very different from each other.

Now, I want to start with men's brains. Alright? Now, men's brains are very _____. Men's brains are made up of little boxes. And we have a box for everything. We've got a box for the _____. We've got a box for the _____. We've got the box for the _____. We've got the box for you. We've got the box for the _____. We've got the box for your mother somewhere in the _____. We've got boxes everywhere. And the _____ is – 'The boxes don't touch!' When a man discusses a particular _____, we go to that particular box, we pull that box out, we _____ the box, we discuss only what is in that box. Alright? And then we close the box and put it away being very very _____ not to touch any other boxes.

Sorry, my Catholic upbringing got to me for a minute, but I... I am not Catholic but I went to Catholic _____ when I was little. I had a nun who taught on _____ like she was born and raised there. I mean I'll never forget it, but it did me good actually. It was a good thing.

Now, women's brains are very very _____ from men's brains. Women's brains are made up of a big _____ of wire. And everything is _____ to everything. Money is connected to the car, car is connected to your job, it is connected to your _____ and everything is connected to everything. It is like zzzzzzzzz. It is like the internet superhighway. And it is all

driven by energy that we call _____. It's one of the reasons why women tend to remember everything, because if you take an event and you connect it to an emotion it burns in your _____ and you can remember it forever. The same thing happens for men. It just doesn't happen very often because, quite frankly, we don't _____. Women tend to care about everything. And she just love it. Okay.

Now men, we have a box in our brain that most women are not aware of. This particular box has _____ in it. It's true. In fact, we call it 'The Nothing Box'. And of all boxes the man has in his brain, 'The Nothing Box' is our favorite box. If a man has a _____, he'll go to his Nothing Box every time. That's why a man can do something seemingly completely brain-dead *for hours on end*, you know, like _____. And we love it. That's why a guy can sit in front of a TV and go... Of course, it drives our _____ nuts because they come up and say "Stop it! You can't possibly be watching anything".

"I'm not! Go away"

Now, they've actually measured this. The University of Pennsylvania a couple of years ago did a _____ and discovered that men have the ability to think about absolutely nothing and still _____. You know, they connected all the wires and stuff like that, watched the brain activity and all of a sudden ...

"I think he's dead!"

"Ha?"

Women can't do it. They can't do it. Their _____ never stops. And they don't understand the nothing box! And it drives 'em crazy! Because nothing drives a woman more crazy or makes her feel more _____ than to witness a man doing nothing!

Now one of the biggest revelations I get out of women, is that whole nothing box issue. They are just...

Everything's starting to make _____. And I've had women say: "Oh, it's nothing? Can I go in his nothing box with him?"

No!

"Why not?"

Because then it's something! Besides, you'll walk in there and go...

"You know, this place could really use some _____...A nice little table over here, some flowers..."

"No! Nothing! Get out! We do want nothing."
