

Resuelva las siguientes operaciones combinadas.

$$a. (6 \times 9 \div \sqrt{9}) + (7 \times 4 \div 14) = \boxed{}$$

$$b. (\sqrt{144} \div 2^2 \times 8) - [\sqrt[3]{8} \times 1^3 + 5] = \boxed{}$$

$$c. [3 + 9 \cdot 2 + (6 \div 2 \times 9 + \sqrt[3]{8}) + 3 \times 3] = \boxed{}$$

$$d. [9 \div 3 \times 6 + 4] + 42 \div 7 \times 5 = \boxed{}$$

$$e. [6 + 10 \times 12 \div 3 - 4] + \sqrt{121} + 9^2 + 50 - 6 - 8 = \boxed{}$$
