

Cell Biology Match and Draw

Draw a line to match the part of the cell with its function.

Nucleus	Contains the pigment chlorophyll for the production of glucose
Mitochondria	Sturdy outer wall of plant cells which maintains regular shape
Ribosome	Contains the genetic information of the eukaryotic cell
Cytoplasm	Semi-permeable membrane that allows transfer of substances
Cell membrane	Site of aerobic respiration in the cell
Cell wall	Large area of a plant cell to store sugars and cell sap
Chloroplast	Processes the DNA to produce proteins
Vacuole	Jelly-like substance where reactions occur
