Do all Quadrilaterals have right angles?  What quadrilaterals are also parallelograms?  What two parts of a regular polygon are congruent?  Are squares rectangles?	What is the difference between a hexagon and an octagon?  Draw a picture of each.	Draw and label the three types of triangles.	What shape can be classified as a quadrilateral, parallelogram, rectangle, and rhombus?  What attributes does a rhombus have?  Can a right triangle be both scalene and isosceles? Explain.
