Read the article about longhouses again and complete the blanks with the comparative and superlative forms.

The long house is a type of home that is found all over the world, from northern Europe, across Asia and also in the Americas. As its name suggests, it's a building which is _____ (long) than it is wide. The fact that this kind of structure is so widespread suggests that it was the _____ (appropriate) in most environments and was also _____ (good) use of local materials. Although the basic idea is the same, there are several variations according to the different conditions around the world.

Traditional longhouses in Asia were homes to more than one family, although not all were _____ (crowded) as in one region of Nepal, where several generations of a large family could mean up to 50 people living together.

The main entrance to Indonesian longhouses is via steps up to a veranda, as the typical longhouse is built on stilts. In the hot climate, a house can cool down _____ (easily) if it's built off the ground. This also means that any livestock can stay in the space under the longhouse, so they are _____ (well) protected. In contrast, a Viking longhouse in northern Europe needed to be _____ (hot) inside than outside. The _____ (close) people were to the animals, the _____ (warm) they were, so Viking longhouses had a section at one end for livestock.

Viking longhouses had one central fire for heat and for cooking, whereas in longhouses in _____ (hot) climates the kitchens are typically built as an annexe apart from the main living area. This means the main rooms are _____ (exposed) to the risk of fire. Indonesian longhouses have a central wall dividing the building into an open public area down one side and _____ (private) rooms along the other side. Both European and Asian longhouses had attics for storage of things like food.

Over the centuries, longhouse design has become more and _____ (sophisticated), but they still remain the design for rural living in tropical areas. In Europe, on the other hand, longhouses were replaced by other architectural styles.

A longhouse in Borneo, Indonesia
