

Pangolin

Choose the correct option

Pangolins are **reptiles - mammals**.

Their bodies are covered with **soft fur - hard scales**.

The brownish scales overlap to form a kind of **armour - shell**.

The scales help them protect themselves from their **prey - predators**, like lions.

Pangolins have a strong sense of **sight - smell**.

They have a long, sticky **tongue - nose**. They use it to catch their favourite food: termites and **spiders - ants**.

Pangolins have strong, curved **claws - nails** in their front feet.

They sometimes walk on their **hind - front** legs.

Baby pangolins ride on their mom's **back - tail**.
