

Algebra: Number Patterns

You can predict the next number in a number pattern by first recording how the numbers are related.

Example A

The numbers increase by 10, so the next number in the pattern would be $351 + 10$, or 361.

Example B

The numbers decrease by 5, so the next number in the pattern would be $230 - 5$, or 225.

Record how the numbers in each pattern are related.
Then predict the next number in the pattern.
