

RECHENBLUMEN: Fun math flowers! Start with the darkened petal on each of the flowers -then add or subtract your way clockwise around the entire flower. When you're done, take the number you get and subtract from it the number in the middle of the flower. Write the answer you end up with on each of the pots below! For an added challenge, try counting IN GERMAN as you work your way around each flower!

MORE MATH FUN:

Add the numbers in any igloo up & down, across or diagonally and they should all add up to the same number – the one shown on the little flag. Can you fill in all the missing numbers?
