

## BINOMIO AL CUADRADO

$$1. (k + 11y)^2 = \underline{\hspace{2cm}}^2 + 2(\underline{\hspace{1cm}})(\underline{\hspace{1cm}}) + (\underline{\hspace{1cm}})^2$$

$\underline{\hspace{2cm}}$  +                    +                     $\underline{\hspace{2cm}}$

$$2. (8a - 5b)^2 = \underline{\hspace{2cm}}^2 - 2(\underline{\hspace{1cm}})(\underline{\hspace{1cm}}) + (\underline{\hspace{1cm}})^2$$

$\underline{\hspace{2cm}}$  -                    +                     $\underline{\hspace{2cm}}$

$$3. (3x^2 + 7z^4)^2 = (\underline{\hspace{2cm}})^2 + 2(\underline{\hspace{2cm}})(\underline{\hspace{2cm}}) + (\underline{\hspace{2cm}}^4)^2$$

$\underline{\hspace{2cm}}$  +    +

$$4. (12 - 10a^8)^2 = (\underline{\hspace{2cm}})^2 - 2(\underline{\hspace{2cm}})(\underline{\hspace{2cm}}) + (\underline{\hspace{2cm}}^8)^2$$

-    +

$$5. (4x^7 + 2y^2)^2 = (\underline{\hspace{2cm}}^7)^2 + 2(\underline{\hspace{2cm}})(\underline{\hspace{2cm}}) + (\underline{\hspace{2cm}}^2)^2$$

+    +

$$6. (c^5d^6 - 6f^{11})^2 = (\underline{\hspace{2cm}}^5 \underline{\hspace{2cm}}^6)^2 - 2(\underline{\hspace{2cm}})(\underline{\hspace{2cm}}) + (\underline{\hspace{2cm}}^{11})^2$$

-    +
