

A horizontal number line is shown, ranging from 0 to 10. Major tick marks are labeled with integers from 0 to 10. Between each integer, there are 10 smaller tick marks, representing tenths. Above the number line, there are six empty boxes. Lines connect these boxes to specific points on the number line: the first box labeled '0,5' is connected to the 5th tick mark after 0; the second box is connected to the 15th tick mark after 0 (1.5); the third box is connected to the 35th tick mark after 0 (3.5); the fourth box is connected to the 55th tick mark after 0 (5.5); the fifth box is connected to the 75th tick mark after 0 (7.5); and the sixth box is connected to the 95th tick mark after 0 (9.5).

$$810 - 80 = \underline{\hspace{2cm}}$$
