

BODMAS

I can solve expressions using the order of operations.

Here are some multi-part expressions. Complete the underlined part of the expression first then use the answer to that to complete the expression.

Here is an example: $3 \times \underline{(2 + 6)}$

$$3 \times 8 = 24$$

1. $7 \times \underline{(8 - 3)}$

6. $21 \div \underline{(4 + 3)}$

11. $9 \times \underline{(3 + 3)}$

2. $7 + \underline{9 \times 2}$

7. $10 - \underline{9 \div 3}$

12. $2^3 - \underline{(3 + 1)}$

3. $\underline{10 \div (6 - 4)}$

8. $\underline{7 + 6 \times 4}$

13. $\underline{(10 + 5) \div 5}$

4. $\underline{12 \div (7 - 4)}$

9. $\underline{(12 + 20) \div 4}$

14. $\underline{12 \div (7 - 4)}$

5. $\underline{(8 + 9)} + 6^2$

10. $\underline{(13 - 6)} \times 5$

15. $\underline{(11 - 3)} \times 7$

Decide which part of each expression to calculate first, underline and complete as above.

1. $\underline{(12 - 7)} \times 8$

2. $9 + \underline{2 \times 7}$

3. $18 \div \underline{(8 - 2)}$

Good Luck !
