A night owl is the opposite. He ⁵ _____ early and he doesn't feel good in the morning. He ⁶ _____ to bed before midnight and he feels fine late at night.

What's the reason? It isn't because night owls are lazy and can't get out of bed. It's because of their internal clock. The human clock is about 24 hours. But for the night owl it's longer and for the early bird it's shorter.
