A- Photos in the news

The main stories (1) our newspapers today are usually accompanied by a photo. In recent years, the pictures published in the press (2) often been taken by ordinary people rather than by professional photographers. Most mobile phones nowadays also contain a camera, (3) means that, whenever something newsworthy happens, someone will (4) able to take a picture of it.

The problem for newspapers using these images (5) that it's hard to check (6) the pictures are genuine or not. This is especially (7) case in a fast-moving situation in which hundreds of pictures and videos are steadily being uploaded (8) the web. The difficulty comes from the fact that there are always many stories in the news (9) various parties have something to gain by getting fake pictures published in the press.

To deal (10) this problem, researchers have developed software that can detect changes to any image or audio file captured using the (11) popular makes of mobile phone. This software keeps an eye out (12) any copies of a file that are emailed or uploaded. It then compares the original file's data with the new version and produces a certificate to show (13) similar the two versions are.

B- A NEW GAME CONSOLE

The first thing to say (1) the new Cato games console is that it looks and feels very much like the earlier version that it replaces. It simply has (2) sleeker design with rounder edges. The new Cato uses a touch screen but (3) is also a rear touch pad. We weren't sure at first (4) the point of this was. However, its potential became obvious (5) we tried out a couple of games that used this new feature to great effect.

I was particularly struck (6) the fact that the new Cato has an in-built camera. This can (7) used to take photos which you can then insert into the games. I also like the way the machine allows you (8) use text or voice chat with your mates, even when you're playing offline or playing different games.

One of the games we tested on the new Cato was an amazing racing game which we're sure will blow fans of this type of game (9) It looks just fantastic, especially when you watch a replay (10) your slick overtaking moves! Mind (11) , everything that we played looked amazing. This is (12) of the impressive screen, (13) is considerably bigger (14) that of the earlier version of the Cato.
