Cell Structures

Join the part of the cell that corresponds to each function described

part of the cell	
	Nucleus نواة
	Ribosome رايبوسوم
	Nucleolus نوية
	mitochondrion ميتوكوندريون
	Centriole مريكزان
	Golgi apparatus جهاز جولجي

function described
produces ribosomes inside the nucleus
converts fuel particles (sugars) into useable energy
directs cell processes; contains the cell's DNA; stores information for cell growth, function, and reproduction
helps manufacture proteins
modifies, sorts, and packages proteins for transport outside the cell
structure near the nucleus that functions during cell division
