

A Polar Molecule

I am a molecule that can attract and repel other molecules

I am a molecule that only contains a negative charge.

I am a molecule that only contains a positive charge.

I am a molecule with a positive and negative charge.

An example of myself is water

I can behave well as a solvent e.g. water

I can form hydrogen bonds with other polar molecules

I do not have any charges.

I cannot bond with other molecules that have charges.
