

# Parts of a Seed

Read, cut, sort and paste the information below into the diagram.

## (Micropyle)

It is a tiny pore in the testa that permits water to enter the embryo before active germination.

## First Root (Radicle)

First part to emerge from the seed during germination and grows downward to the soil.

## Food Storage (Cotyledons)

A store of food for the young plant to use until it has grown enough to make its own food.

## First Shoot (Plumule)

This later develops into the stem, leaves and flowers.

## Seed Coating

A tough outer covering that protects the inside of the seed.
