

BIOLOGY:

1. Watch the video below;

Polar bear

Polar Regions

The areas immediately around the North and South poles are frozen deserts, but move a little farther out and plenty of animals live with the ice.

Deciduous leaf

Cool Forests

Parts of the world have seasons: spring, summer, fall, and winter. It is an environment in which broad-leaved, or deciduous, trees flourish.

Butterfly

Rainforests

In areas of land near the equator, it is hot and humid. This is where you will find the tropical rainforests, full of colorful plants and animals.
