REINDEER

How does Santa deliver his sleigh full of presents every year? IF you said with the help of his reindeer you guessed it! Did you know that another name for reindeer is caribou? They live on the **tundra** in the northern parts of North America, Europe, and Asia. The tundra is a large area without trees in the Arctic. Reindeer are **herbivores** or animals that eat plants. They eat plants such as herbs, grasses, moss, and leaves. Reindeer travel together in groups called herds. They are fast runners and can run up to 50 miles per hour!

FUN FACTS	
Weight	- 240-700 pounds
Size	- 4-5 feet tall
Lifespan	- They can live up to 15 years

REINDEER ARE BUILT FOR THE COLD WEATHER.

Reindeer have special noses that warm up the air before they breathe it.

Reindeer hooves help them walk on ice, snow, and to dig for food.

Reindeer antlers are unique to each reindeer. No two reindeer have the same kind of antlers. Both male and female reindeer have antlers.

The fur on reindeer keeps them warm and helps them float in water.
