

MODELLING

Objective: Explore the human senses and the ways we use them to learn about the world.

Your **brain** controls your sense organs. When your eyes see something, a message is sent from them to your brain. Your brain **interprets** the message so that you can tell what the thing is. This happens very quickly so that we can react to what we see, hear, touch, taste or smell.

Directions: Sort the given objects according to the human senses.

Great Fire of London Senses			
See	Hear	Smell	Touch
			

Type the words into the correct senses.

buildings	fire	people running	black smoke
water	houses falling	shouting	screaming
babies crying	horses neighing	wood creaking	busy crowds
burning	wood	smoke	sweat
dust	hot	warm	water
burnt	possessions
