

SOLVING EQUATIONS 1-step

An **equation** links 2 expressions with an equal sign.

An equation is like a balanced scale which will remain balanced as long as we do **the same** to both sides.

Your aim is to get the pronumeral/variable by itself on one side of the equal sign by 'undoing' everything else around it.

e.g.

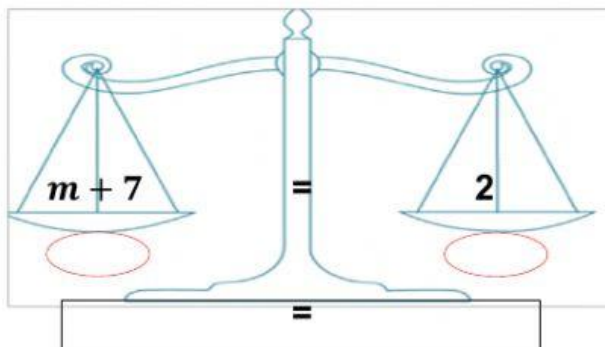

$$\frac{x}{5} = 2$$

=

$$3f = 12$$

=

Solve these equations:

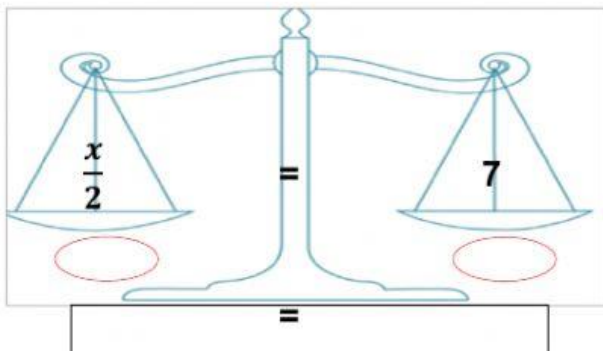

$$g + 7 = 8$$

=

$$k - 8 = 13$$

=

$$\frac{x}{9} = 5$$

=
