

Mapa Bicontinental de la República Argentina

Coloco los nombres de los límites geográficos de la República Argentina y principales referencias fuera del territorio continental americano.

Bolivia	Paraguay	Uruguay	Brasil	Chile
Océano Atlántico	Océano Pacífico	Pasaje de Drake	Mar Argentino	Antártida Argentina

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is becoming more undernourished. The most important is that the world's population is growing very rapidly. In 1990, the world's population was 5.3 billion. By 2000, it will be 6.1 billion, and by 2020, it will be 7.5 billion (UNEP 1996).

Another reason why the world's population is becoming more undernourished is that the world's food supply is not growing fast enough to keep up with the growing population. In 1990, the world's food supply was 1.5 billion tonnes. By 2000, it will be 1.7 billion tonnes, and by 2020, it will be 2.0 billion tonnes (UNEP 1996).

A third reason why the world's population is becoming more undernourished is that the world's food is not distributed evenly. In 1990, the world's food was distributed so that 1.5 billion people had enough to eat, 1.5 billion people had not enough to eat, and 1.5 billion people had no food at all (UNEP 1996).

There are a number of things that can be done to help the world's population become more well-nourished. The most important is to increase the world's food supply. This can be done by increasing the world's food production, by increasing the world's food storage, and by increasing the world's food distribution (UNEP 1996).

Another thing that can be done to help the world's population become more well-nourished is to improve the world's food distribution. This can be done by increasing the world's food distribution, by increasing the world's food storage, and by increasing the world's food production (UNEP 1996).

A third thing that can be done to help the world's population become more well-nourished is to improve the world's food storage. This can be done by increasing the world's food storage, by increasing the world's food distribution, and by increasing the world's food production (UNEP 1996).
