Watch the video below;

## How did I get my genes?

You inherited 23 chromosomes, with their genes, from your mother and 23 chromosomes, with their genes, from your father. Your parents, in turn, inherited their genes from their parents—your grandparents. You, your parents, and your grandparents each ended up with 23 pairs of chromosomes, 46 in total.

How many chromosomes did you inherit?

# ANATOMY:

**Toddler 1 to 2**  
Your muscles are stronger. You learn to walk, climb stairs, and carry things. By age 2, your brain is about 80 percent of its adult size.

**Toddler 2 to 3**  
Your muscle control is better, so you can turn a book's pages, build brick towers, scribble, and feed yourself—messily! You can say 250 to 900 words.

What do you learn from ages 1 -2 ?

What do you learn from ages 2 -3 ?

# ANATOMY:

## Teething time

When you were born, there were 20 milk teeth inside your jaw. They didn't start to break through your gums until you were a few months old. The milk teeth are gradually replaced by 32 adult teeth as you grow.

How many teeth do you have as an adult?

### Newborn baby

When you are not being fed, you are mostly sleeping—about 16 hours a day! You cannot control your movements. You can focus only on nearby objects.

How many hours does a baby sleep?
