Circulatory System
Transport **oxygen** and **nutrients** to each cell in your body, and takes waste products like carbon dioxide to the lungs where expels it from the body
The **heart** pumbs blood round the body throught three different types of blood vessel
**Blood vessels**
**Blood**
**Arteries** take the blood from your heartto all parts of your body
**Veins** bring blood from your body back to your heart
**Capillaries** connect arteries and veins
**Gas exchange**: oxygen and carbon dioxide can move between blood and tissue cells in the body
