EQUATOR MONUMENT

Equator Monument is icon of Pontianak. As we know that Pontianak is one of the city in the world which pass by equator line. It marks the division between the [northern](#) and [southern hemispheres](#). Equator Monument is located in Khatulistiwa Street, Pontianak Utara subdistrict West Kalimantan. It is about 30 minutes from the Capital city. The Monument was built in 1928, it has been reconstruction for 3 times.

The original monument is actually small. It is located inside the big Monument. The monument consists of four [iron wood](#) poles, each with a diameter of about 0,30 metre, with frontage bollard height is two pieces as high as 3,05 radian place backside bollard and the signpost dart as high as 4,40 metres. Entering the room in the Equator Monument, visitors will see the photos displayed on the walls of this building. These photographs date from the 1930s to the present. In addition, there is also an explanation of the knowledge of the world of astronomy, such as data on the earth, solar system, stars, moon, sun and galaxies. Relief paintings depicting Pontianak City and the Equator Monument also adorn the walls in this building.

Every year, many tourist visit this monument. They are interested in watching an Important and amazing events around the Equator Monument names "Culmination". This natural phenomenon happens when the sun is right on the equator. At that time the position of the sun will be directly above the head, thus removing all shadows of objects on the surface of the earth. At the culmination of this event, the shadow of the monument will "disappear" a few seconds when exposed to sunlight. Likewise with the shadows of other objects around the monument.

The sun's culmination point occurs twice a year, namely between 21-23 March and 21-23 September. This natural event is an annual event in the city of Pontianak that attracts tourists.
