### Making Observations

A. Scientists make **observations** by using their five senses to collect information about the natural world.

Let's go Grade 5 Scientists, it is time do some observing.

Which of your five senses could you use to observe a rock like the one in the picture below?

← Rock

**Instruction:** Tick the correct box to select which of the five sense you could use to get information about the rock.

1. The rock is rough or smooth.

Seeing      hearing      smelling      tasting      feeling

2. This rock is gray in colour.

Seeing      hearing      smelling      tasting      feeling

3. The rock is odourless.

Seeing      hearing      smelling      tasting      feeling

4. The rock is salty.

Seeing      hearing      smelling      tasting      feeling

5. The rock does not make any sounds on its own.

Seeing      hearing      smelling      tasting      feeling

**Bonus Activity:**

6. The word *Odourless* means that it has no:

sound                      smell                      taste                      feel

7. A scientist who studies about rocks is a:

geologist    biologist    zoologist    botanist
