## Picturing Plants

Each picture shows a stage in the reproduction of a flowering plant. Study each picture. Write the letter of the matching caption in the flash.

- A. An insect or the wind picks up pollen from the stamen.
- B. A pollen tube grows down into the ovary to fertilize the egg.
- C. The fruit ripens, splits open, and releases seeds.
- D. The seeds form new plants.
- E. The pollen lands on the stigma of the pistil of another flower.
- F. The ovary enlarges and forms a fruit with seeds.
