

Name _____ Class _____ Date _____

1. Write the missing words in each space

Articulators

Articulators are used to _____ the movements of the upper and _____ jaws. Thanks to them the dental technician can study both natural and _____ occlusion outside the patient's _____.

Articulators are composed of two _____: the upper one or _____ and the lower one or _____. Anatomically, the _____ jaw is fixed while the _____ jaw, or mandible, makes the movements. In the case of articulators the situation is opposite. That is the _____ part carries the movements.

There are _____ classes of articulators:

- Class 1 articulators only reproduce _____ movements of the mouth.
- Class 2 articulators _____ vertical and some _____ movements of the mouth.
- Class 3 articulators are easily _____ so they satisfy most dental _____.

- Class 4 articulators are individually _____ and reproduce the _____ of single patients. They are very _____, that's why dental technicians _____ usually use them.

2. Join with arrows →
