Score:

Goal. The student will be able to measure and use ruler and compass to construct geometrical shapes to make transformations and to use the basic concepts of geometry to classify and construct angles, besides identify and classify the main characteristics of polygons (triangles and quadrilaterals) and polyhedral (prisms, pyramids, cone, cylinder and sphere).

1. Hallar el número de diagonales del polígono regular cuyo ángulo exterior mide 24° .
2. En un polígono la suma de las medidas de los ángulos internos y externos es 2520° . Calcular el número de lados del polígono.
