IN THE PAST

A rhyming couplet poem uses pairs of lines of the same length that rhyme to complete a single thought. There is no limit to the length of the lines you can write. Use the 5 pairs of rhyming couplets below as an example to help you write a rhyming couplet poem about a Yutyrannus.

The Yutyrannus was a Chinese dinosaur
Thought to be a 2 legged predator

Of the Tyrannosauroida family
It's fossils were found in a Liaoning quarry

Living almost 125 million years ago
In a land of ice and snow

It had feathers but did not fly
Instead the feathers kept it warm and dry

There is little more that scientist can say
But they are learning more every day
