2 **Listen again and answer the questions.**

According to Dan:
1 Why haven't home developers been using organic material?
2 Why will it take longer for technology to be a part of our homes?
3 What is an example of smart home automation?
4 What do people currently use robots at home for?
5 How will the houses of the future be energy efficient?

- Sensors will be user around the house that can tell which rooms are empty and reduce the amount of electricity used in them

cleaning floors

They have been thinking so hard about creating homes with cost-efficient and long- lasting materials

due to its high cost

programming homes through smart phones.
