

# THE SUN

1. Watch the video:

Complete this text about the Sun using the words in the wordbank

The Sun is a huge \_\_\_\_\_ made of gas. It is in the \_\_\_\_\_ of the Solar System and all the planets \_\_\_\_\_ around it, attracted by its gravity. The surface temperature of the Sun is 5800°C and compared to Earth, the Sun is \_\_\_\_\_ so 1.300.000 Earths would fit inside it.

It is also very far \_\_\_\_\_ from us, at 150.000.000 km away, so it would take us 170 years by car to get there! At that distance, it takes about 8 \_\_\_\_\_ for the light to reach us. This means that when we see the Sun set, the event has actually occurred eight minutes ago!

The Sun is very important because it gives us \_\_\_\_\_ and \_\_\_\_\_, without it there would not be days or nights and the Earth would be a dark, \_\_\_\_\_ world. It also gives out \_\_\_\_\_ light which is very \_\_\_\_\_ for our skin and can cause sunburnts. That is why it is so important to use sunscreen.
