The life cycle of a butterfly is made up of five parts:

- 1> Egg – the female butterfly lays its eggs onto a leaf
- 2> Caterpillar – after a few days the egg hatches into a caterpillar
- 3> Eating – the caterpillar eats & eats for about 2weeks until it grows
- 4> Pupa – the caterpillar forms a pupa around itself & hibernates for a week
- 5> Butterfly – after a week, the butterfly uses its wings to break out of the pupa. It then flies away.
